

THE 2023 INTERNATIONAL METROLOGY CONGRESS THINKS **BIG** FOR ITS 40th ANNIVERSARY!

November 2022

One can definitely affirm that the history of the Congress is filled with success! The loyal and faithful participants of this unique event in Europe will remember the standalone editions in provincial cities, those coupled with other shows or even the most recent, held in conjunction with the Tradeshow Global Industrie. And here is what is planned for 2023...

A powerful duo within the first French industrial region

The Congress is dedicated to the best industrial practices and advances in R&D applied to measurements, analysis and testing processes: this great event will be the meeting point between science, industry and institutional organisations of metrology.

From **March 7 to 10, 2023** at **Eurexpo Lyon - France**, the **CIM2023** - International Metrology Congress renews the experience with THE biggest french industrial tradeshow dealing with industrial topics, **Global Industrie**, where more than 40,000 visitors are expected. The geographic location of the city offers many connections with bordering countries, a strong representation of the business sector, not to mention the gastronomy that Europe and the whole world envy so much!

A bold programme facing the world's challenges

The event becomes a **4-day event** with the aim of approaching and dealing with all the topics responding to the most current global challenges. An unique occasion to share expertises, and collect information on market developments, research and innovation in the field of measurement. See the [detailed programme here](#).

- **200 oral and poster presentations**
- **6 Round Tables** on hot topics: Hydrogen, Circular Economy, Industry 4.0, Digital Transition, Evolution of the Profession, Health
- **1 Plenary Session** "*Limitless Metrology at your fingertips*" on 3 key applications such as, Industry 4.0, Environment and Health
- 1 Climate Workshop - **MetClimVOC**
- **10 Pitch' Experts presentations**
- Many **networking activities** (coffee/lunch breaks, aperitif cocktails, exhibitors' parties, Gala Dinner, MyGI mobile application...)

A Congress within an enlarged exhibition

In the heart of the Measurement, Control, Vision and Instrumentation universe will be located the **Metrology Village**. Both attendees and exhibitors of the CIM will meet in this central area. **Poster presentations** as well as a **non-stop coffee service** will also be livening up the area. It will definitely be the main core of the Congress and a place that cannot be missed to meet people and do business!

The audience is composed of **800 participants from 45 countries**:

- 70% are end-users from industry, from all sectors and laboratories
- 30% are organisations, academics and researchers

A few words from **Pierre BARBIER** - Metrology Expert and CIM creator

After a first standalone edition in Bordeaux in 1983, it is obvious the CIM travelled around before settling down in Lyon. Metrologists are used to work alone but they must constantly keep themselves up-to-date with the latest technical standards, regulations and technological developments. The *International Congress of Metrology* was born from that desire and need. This biennial conference moves with times and its constraints but has always kept its DNA. The only significant difference is the "Ladies Programme" run in parallel of the Congress specifically for the metrologists' wives. Times have changed and our profession has evolved, becoming more inclusive for women.

This edition pushes in this direction by organising a near gender parity for the session chairwomen and chairmen.

In addition, the International Women's Day will be celebrated at the same time as the conference. Welcome to the new era of CIM!
